

WHAT IS CLAIMED IS:

1. A communication terminal apparatus capable of sending and receiving e-mails comprising:

an input section for entering an e-mail address;

a storage section for storing a plurality of partial e-mail addresses; and

a selection section for selecting one from among the stored partial e-mail addresses;

wherein in entering an e-mail address, a part of the e-mail address is first entered from the input section and then the partial e-mail address selected from the storage section by the selection section is combined with the part of the e-mail address entered from the input section to complete the e-mail address entry.

2. The communication terminal apparatus of claim 1, wherein the plurality of partial e-mail addresses are stored in a predetermined order in the storage section, the selection section retrieves the partial e-mail addresses stored in the storage section in that order to select one from there among, and the order in which the selection section retrieves the partial e-mail addresses can be arbitrarily specified.

3. The communication terminal apparatus of claim 1, wherein the plurality of partial e-mail addresses stored in the storage

section are classified into predetermined categories, and selection from among the stored partial e-mail addresses is carried out in response to selection of one from among the predetermined categories.

4. The communication terminal apparatus of claim 2, wherein the plurality of partial e-mail addresses stored in the storage section are classified into predetermined categories, and selection from among the stored partial e-mail addresses is carried out in response to selection of one from among the predetermined categories.
